Introduction ○●○		

We propose a multi-scale octave convolution layer to learn robust speech representations efficiently.

The Centre for Speech Technology Research, The University of Edinburgh, UK

Introduction ○●○		

- We propose a multi-scale octave convolution layer to learn robust speech representations efficiently.
- We build on OctConv proposed by Chen et al. (Facebook AI) at ICCV 2019 for Computer Vision (CV).

Introduction 0●0		

- We propose a multi-scale octave convolution layer to learn robust speech representations efficiently.
- We build on OctConv proposed by Chen et al. (Facebook AI) at ICCV 2019 for Computer Vision (CV).
 - Reduce the spatial redundancy of the feature maps by decomposing the output of a convolutional layer into feature maps at two different spatial resolutions, one octave apart.

Introduction 00●		Conclusions

Motivation

Iow resolution processing path increases the size of the receptive field in the original input space

Joanna Rownicka, Peter Bell, Steve Renals

The Centre for Speech Technology Research, The University of Edinburgh, UK

A (1) × A (2) × A (2) ×

Introduction 00●		Conclusions

Motivation

- Iow resolution processing path increases the size of the receptive field in the original input space
- spatial average pooling in a low resolution group can be interpreted as a **low-pass filter** providing smoothed speech representations – potentially useful for noisy speech

The Centre for Speech Technology Research, The University of Edinburgh, UK

Introduction 00●		Conclusions

Motivation

- Iow resolution processing path increases the size of the receptive field in the original input space
- spatial average pooling in a low resolution group can be interpreted as a **low-pass filter** providing smoothed speech representations – potentially useful for noisy speech
- enables to model the information changing at different rates (e.g. the characteristics of the speaker or background noise and the information necessary for phonetic discrimination)

Method ○●○	Conclusions 00

Implementation

- upsampling \rightarrow bilinear interpolation
- downsampling \rightarrow 2D average pooling

$$\begin{split} \mathbf{Y_1} = & f(X^1; W^{1 \rightarrow 1}) + \texttt{upsample}(f(X^2; W^{2 \rightarrow 1}), 2) \\ & + \texttt{upsample}(f(X^3; W^{3 \rightarrow 1}), 4) \end{split}$$

$$\begin{split} \mathbf{Y_2} = & f(X^2; W^{2 \rightarrow 2}) + \texttt{upsample}(f(X^3; W^{3 \rightarrow 2}), 2) \\ & + f(\texttt{downsample}(X^1, 2); W^{1 \rightarrow 2}) \end{split}$$

$$\begin{split} \mathbf{Y_3} = & f(X^3; W^{3 \rightarrow 3}) + f(\texttt{downsample}(X^1, 4); W^{1 \rightarrow 3}) \\ & + f(\texttt{downsample}(X^2, 2); W^{2 \rightarrow 3}) \end{split}$$
