Electronics and Telecommunications Research Institute

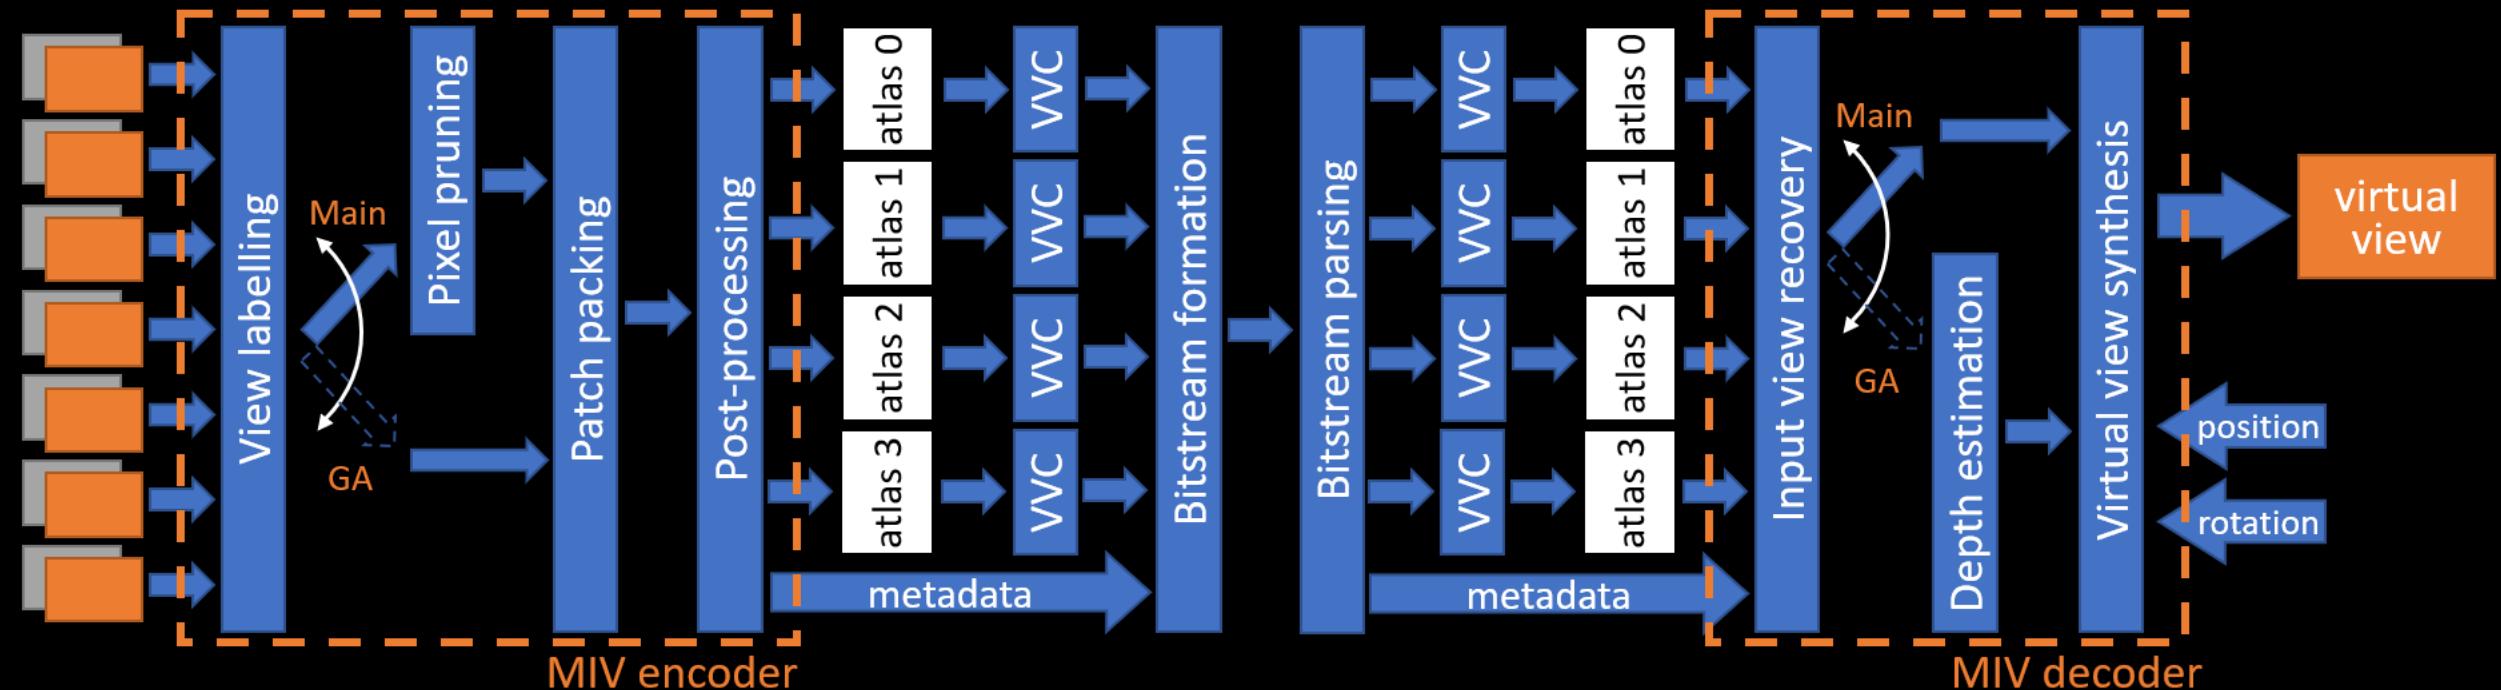

MPEG immersive video

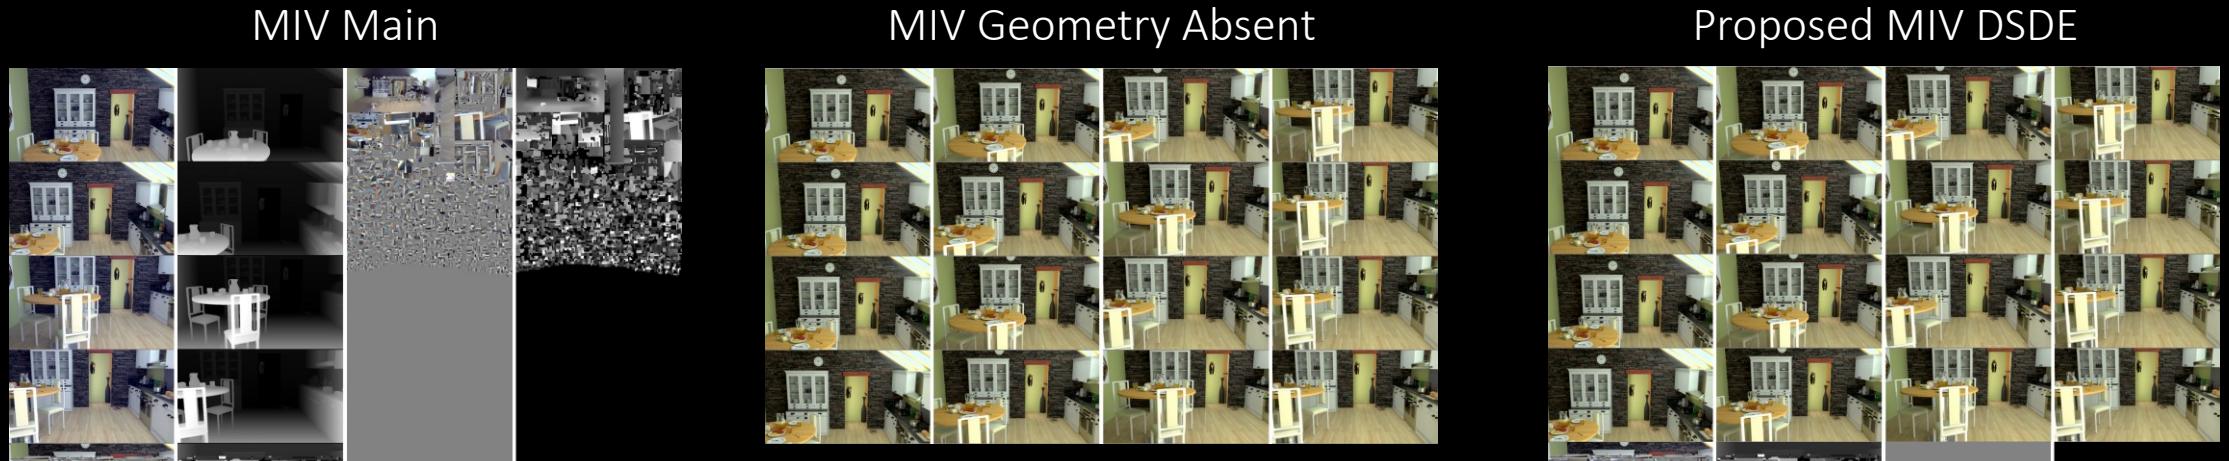

trajectory of the viewer

MIV Main and MIV Geometry Absent profiles

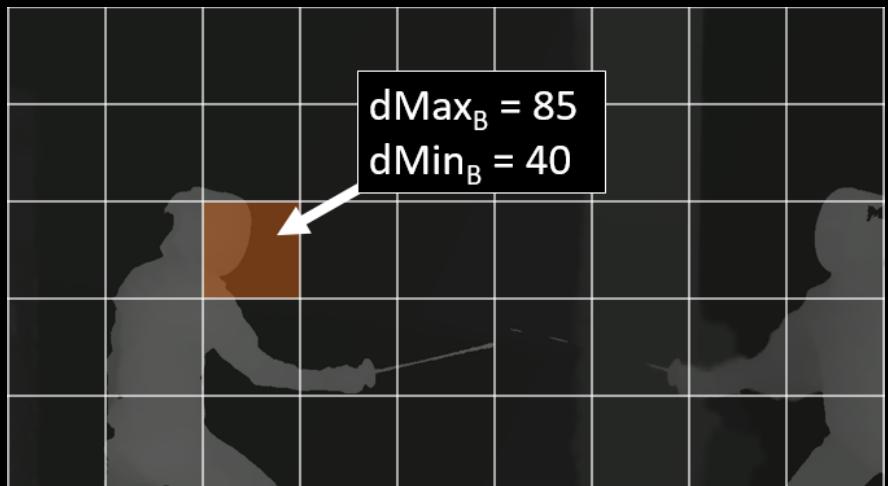

- Covering all existing and some potential use cases of decoder-side depth estimation
 - Enable depth estimation or depth refinement at the decoder side in more use cases
 - Allow for transmitting partial (or complete) geometry information

Geometry Absent + Extended geometry assistance SEI [1]

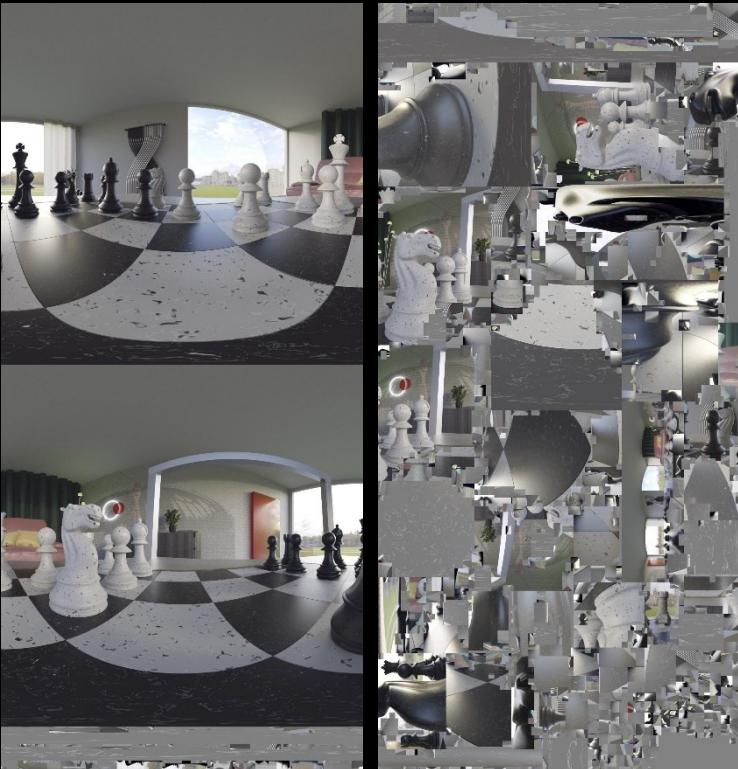

Already included into the MIV ed. 2:

- typical geometry assistance (features sent for all views, no recursion),
- recursive features,
- features sent for a subset of views,
- recursive features sent for a subset of views,
- different level of details for different views
(quantization step, block width, number of splits set per view),
- possibility for adding new schemes of feature extraction
(not only block-based rectangular grid).

Existing and potential use cases of decoder-side depth estimation

MIV Main with depth refinement

Post-processing of depth maps treated as decoder-side depth estimation

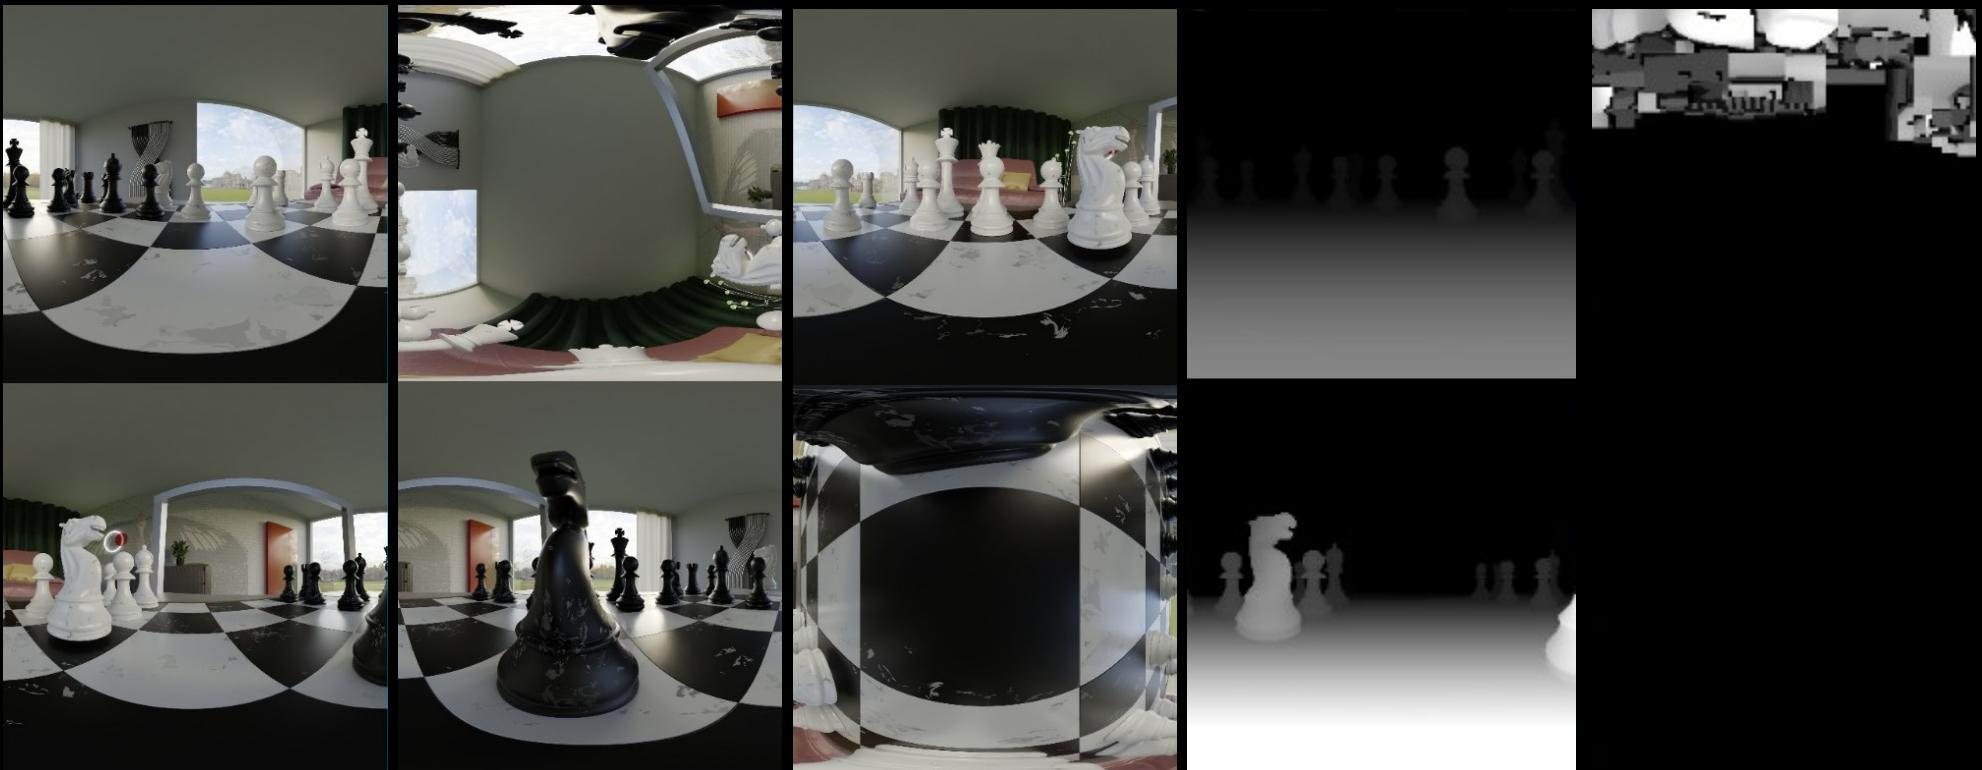

Input depth map assistance [3]

[3] D. Klóska, D. Mieloch, A. Dziembowski, M. Domański, G. Lee, J.Y. Jeong, "Decoder-side depth estimation with input depth assistance", ISO/IEC JTC1/SC29/WG4 MPEG VC M58048, 10.2021.

Extended input depth map assistance [4]

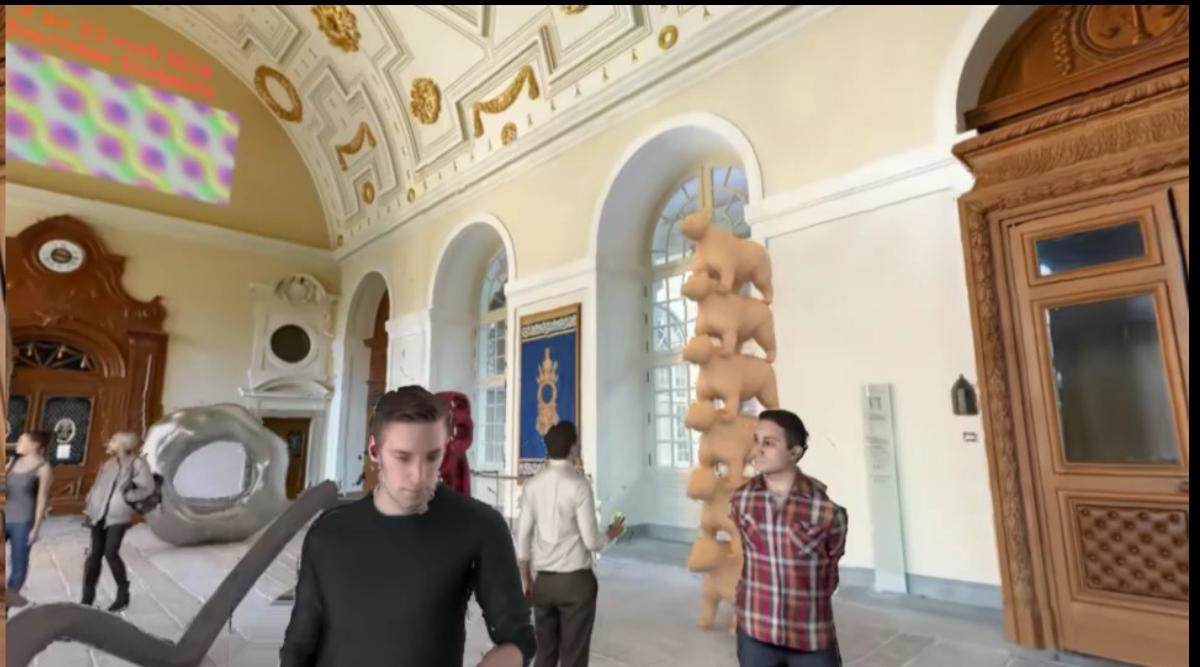

[4] D. Mieloch, A. Dziembowski, B. Szydełko, D. Klóska, G. Lee, J.Y. Jeong, “[MIV] Decoder-side depth estimation with extended input depth assistance”, ISO/IEC JTC1/SC29/WG4 MPEG VC M59516, 04.2022.

Comparison of various approaches

No assistance

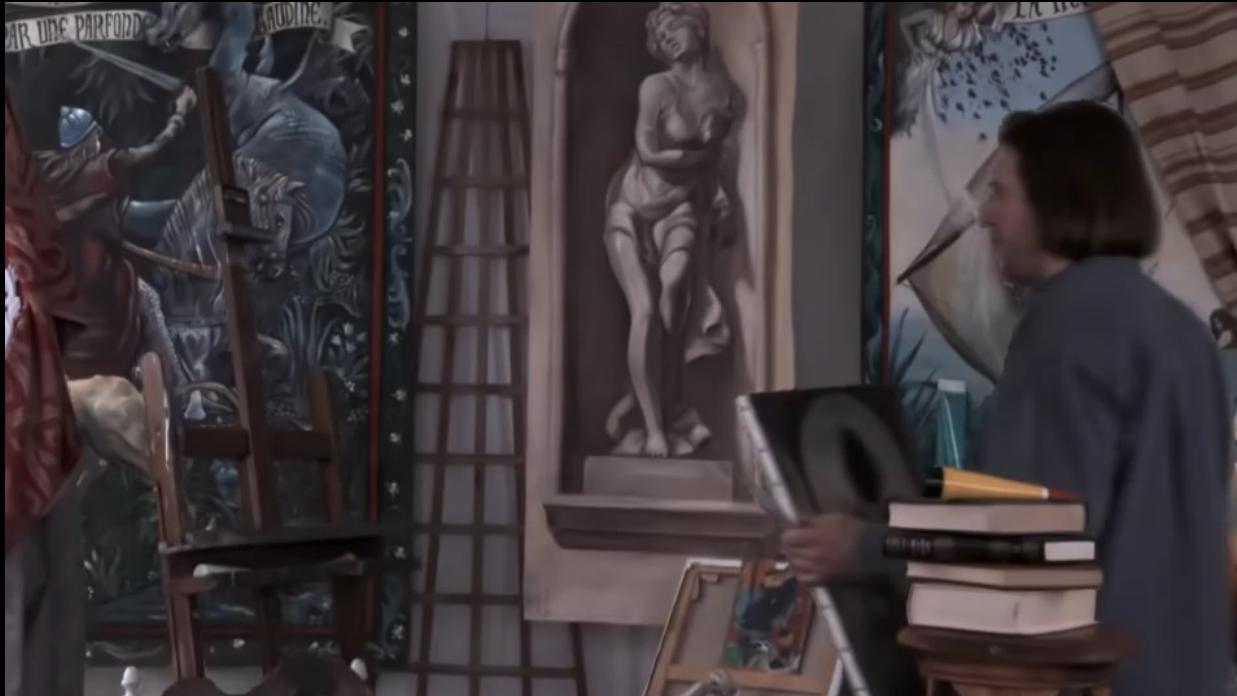

Extended input depth map assistance

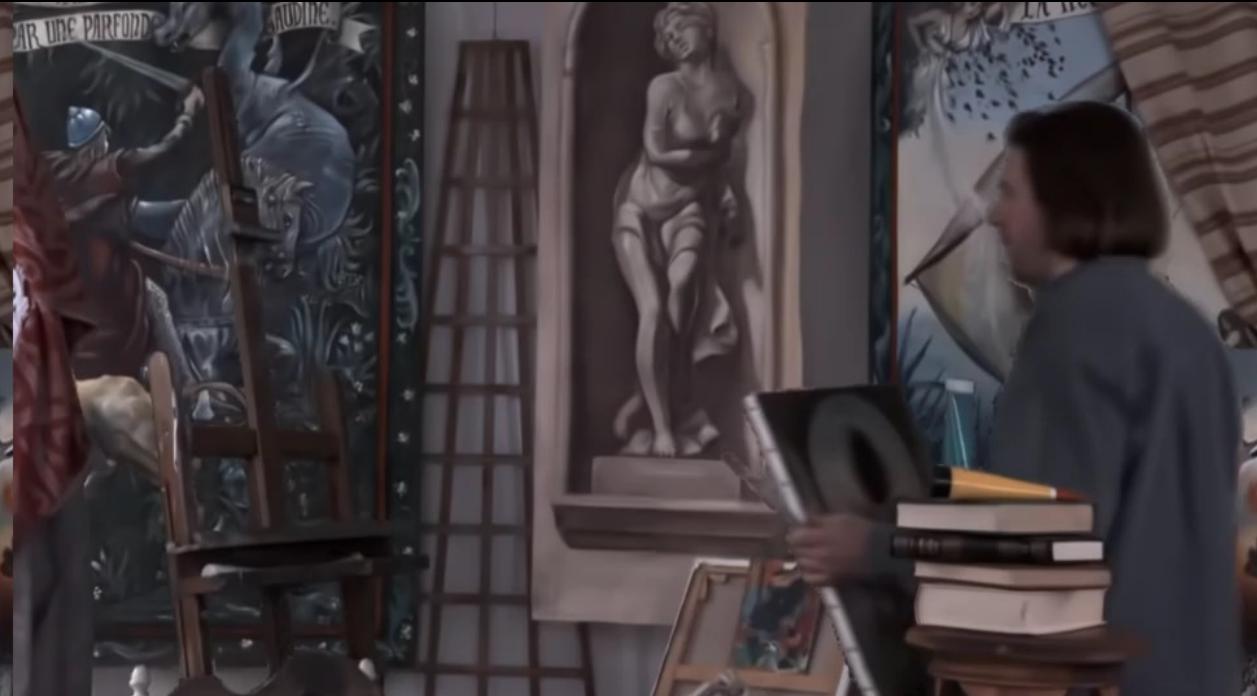

On average 3 times faster rendering
(including depth estimation)

Comparison of various approaches

No assistance

Extended input depth map assistance

On average 3 times faster rendering
(including depth estimation)

Comparison of various approaches

Functionality	Use case		MIV Geometry Absent (GA)	MIV GA with SEI	MIV Main w/o depth transmission	MIV Main w/ refinement	IDMA: Input depth map asst.	Extended IDMA	Faster ext. IDMA	Usage of depth sensors	MIV Main (no DSDE)
Section of [5]	2.1	2.1.1	2.2	2.3	2.5	2.6	2.7	2.8	2.9	-	
Decoder-side depth estimation	yes	yes	yes	yes	partial ¹	yes	yes	partial ²	yes	no	
Texture video transmission	yes	yes	yes	yes	yes	yes	yes	yes	partial ³	yes	
Texture pruning in encoder	no	no	yes	yes	yes	no	no	no	no	yes	
Geometry (depth) video transmission	no	no	no	no	yes	partial ⁴	partial ⁴	partial ⁴	partial ⁴	yes	
Geometry pruning in encoder	no	no	no	no	yes	no	yes	yes	no	yes	
External occupancy video transmission	no	no	no	yes	no	no	no	no	no	no	
Additional (non-video) depth information	no	yes	no	no	no	no	no	no	no	no	
Depth reprojection in decoder	no	no	no	no	no	no	yes	yes	yes	yes	

¹ Only depth refinement (reestimation); ² Depth estimated only for fragments of the depth maps; ³ Bitstream contains geometry videos which do not correspond to any texture video; ⁴ Bitstream contains texture videos which do not correspond to any geometry video.

Syntax element	MIV Geometry Absent (GA)	MIV GA with SEI	MIV Main w/o depth transmission	MIV Main w/ refinement	IDMA: Input depth map asst.	Extended IDMA	Faster ext. IDMA	Usage of depth sensors	MIV Main (no DSDE)	
Section of [5]	2.1	2.1.1	2.2	2.3	2.5	2.6	2.7	2.8	2.9	-
ai_attribute_count[atlasID]	1,1,1,1 ¹	1,1	1,1	1,1	1,1,1	1,1,1,0	1,1,1,0	1,1,1,0	1,1	
vps_geometry_video_present_flag[atlasID]	0,0,0,0	0,0	0,0	1,1	1,0,0	1,0,0,1	1,0,0,1	0,0,0,1	1,1	
vps_occupancy_video_present_flag[atlasID]	0,0,0,0	0,0	1,1	0,0	0,0,0	0,0,0,0	0,0,0,0	0,0,0,0	0,0	
vme_embedded_occupancy_enabled_flag	0	0	0	1	1	1	1	1	1	
casme_decoder_side_depth_estimation_flag	1	1	1	1	1	1	1	1	0	
V3C SEI payloadType	-	133/134 ²	-	-	-	-	-	-	-	
mvp_depth_reprojection_flag	0	0	0	0	0	1	1	1	-	
mvp_reestimate_all_geometry_flag	1	1	1	1	1	1	0	0	-	
mvp_keep_transmitted_geometry_flag[v]	-	-	-	-	-	-	1	1	-	
mvp_keep_reprojected_geometry_flag[v]	-	-	-	-	-	-	0/1 ³	0/1	-	

¹ Notation “1,1,1,0” means, that a flag is true for atlases 0, 1, and 2, and false for atlas 3.

² payloadType equal to 133 indicates geometry assistance SEI, 134: extended geometry assistance SEI.

³ The flag may be set to 0 or 1 for each view v , depending on its quality and desired computational time reduction.

- The first review of state-of-the-art compression methods based on decoder-side depth estimation.
- New MIV Extended Decoder-Side Depth Estimation profile (already adopted to incoming MIV ed.2) allows for using all reviewed compression methods but also is as future-proof as possible.
- Features of MIV DSDE enable the continuous improvement of the efficiency of incoming MIV ed. 2, even after the standard will reach its final stage.
- Both the already adopted parts of the profile and the additional flags were proposed by the Authors during the 140th MPEG meeting.
